Library and Learning Resource Center

Lisle, Illinois

CLIENT	Benedictine University
ARCHITECT	DLR Group
ROLE	Construction Manager

ICI completed a build-out of several levels of Benedictine University's Kindlon Hall to make way for the University's library, conference and collaboration rooms and new administrative and office spaces. Major mechanical upgrades were also required to service the newly finished space. The built-out spaces include a learning commons with group study spaces, individual study spaces, a reference help desk, an IT help desk and library staff offices.

The collaboration rooms are among the most widely used spaces within the new library. Each of the 4 spaces are equipped with state of the art technology to accommodate smaller groupings. Additionally, the furniture systems can easily be reconfigured depending upon the current use of the room; from training room style rows to large tables.

Library and Learning Resource Center [CONT.'D]

Lisle, Illinois

[CONT.'D] The project was completed in just under 5 months. The space came in on budget. This project was constructed concurrently with the Benedictine University Borsellino Football Center.
