

Land Rover Orlando

Orlando, Florida

CLIENT	Fields Auto Group
ARCHITECT	JRB Group Architects
ROLE	Construction Manager

The new construction 33,240 square foot Land Rover Dealership in Orlando, Florida was completed in a 10-month project schedule and features a contemporary interior and exterior design with the added amenities of a customer lounge, patio and Land Rover off-road test track with water feature.

The service area features 17 service bays, one alignment rack and three detail bays. Energy efficient, high speed motion sensors activate the bay doors when a vehicle approaches. The maintenance free floors are poured, dyed with a concrete finish, and then sealed with a buffering polish. During the preconstruction phase, ICI provided over \$110,000 in value engineering options. Also during design, ICI and JRB Group worked closely in the redesign of the shop light fixture package. T8 fluorescent light fixtures reduce energy usage throughout the store. Furthermore, an environmentally safe, filtered, underground runoff system was developed conserving usage of public wastewater treatment facilities.
