

Jaguar Land Rover

Jacksonville, Florida

CLIENT	Fields Auto Group
ARCHITECT	JRB Group Architects
ROLE	Construction Manager

For more than twenty years the Fields Auto Group, JRB Group Architects and ICI have collaborated on the construction of over twenty-five car dealerships across the nation.

During that time, projects have entailed the construction of new ground up facilities as well as the renovation, conversion or expansion of existing facilities.

The ground up 31,614 square foot Jaguar Land Rover Dealership in Jacksonville, Florida was completed in the spring of 2019. The new dealership is situated on 6.72 acres and features the brand's new "arch" design concept. The new concept features both the Jaguar and the Land Rover concept in a "dual store" environment. The space includes high-end finishes and state-of-the-art building systems. The two franchise exteriors are comprised of Alucobond aluminum panels and clear anodized, "low-e" aluminum storefront and curtainwall systems. [CONT'D]

Jaguar Land Rover [CONT'D]

Jacksonville, Florida

[CONT'D] The space also features specialty light fixtures by Reggiani and custom delivery doors by Renlita. The interior glass as well as the exterior structural glass were enhanced by a frameless system.

Given that the project was in a hurricane impact zone, the exterior glass was structural as well as impact resistant. The exterior glass was 1.5" thick and was imported from overseas.
